## FORMULA TO BUILD A GREAT CITY:

- We must attract great companies who bring more revenue and employment.
- These companies need to attract and hire highly educated employees to run their businesses.
- Highly educated employees move to cities whose educational system is top rated.
- To achieve top rated schools, we must attract and retain top rated teachers who in turn will be hired by A.S.K. Charitable to help group tutor the children.
- With this formula, and revenue from the big companies we can now afford to pay higher salaries to the educators while increasing technology. No longer will we have to raise taxes and mill levies to make our city great.
